

InstallStrip

Estimating Guide

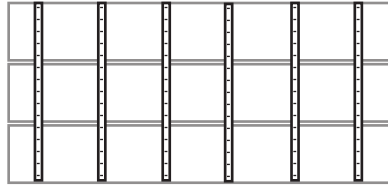

InstallStrips are 45 inches long, industrial grade galvanized steel.

There are 'break points' designed into each InstallStrip so that a single 'Strip' can be easily separated into two or three pieces (15", 30" or 45"). Simply, SNAP at the breakpoint. No tools are required.

As an estimating guide, use two InstallStrips per 8 foot panel at 16" on center.

For Example:
Three 8 foot panels use six InstallStrips

Two 8 foot panels use four InstallStrips

Seven and a half 8 foot panels use fifteen InstallStrips
